

Partner case study

MayTek IT Solutions

Company overview

Western Sydney based IT solutions company, MayTek have been in operation since 2005, equipping businesses with quality IT resources to ensure a reliable, productive and secure workplace. MayTek is focussed on building long term partnerships with clients and is committed to streamlining their workforce and helping them on their road to success. With a mission to provide proactive and meaningful support, MayTek aim to improve all facets of the workplace through smart and innovative IT solutions.

Acknowledging the significant costs associated with Desktop as a Service (DaaS), MayTek went searching for a Partner who could provide the infrastructure for the services they desired...

Initially meeting with Hosted Network's Managing Director, Ben Town and Cloud Channel Manager, Meryl Palma, there was an "instant connection" says MayTek's Managing Director, Damon May. "We were enticed to the people first of all, then the technology after - they [Hosted Network] had an understanding of what we wanted to achieve... the gut feeling straight away was that these guys were the ones that we want to do work with", says Damon.

Working with Partners and acting as extended members of their team, Hosted Network has built its foundations upon long-lasting, fruitful relationships that thrive on Partner growth and success, Damon continues, "There was an appreciation of our background and where we came from, as well as a willingness to work with us which has been carried throughout our relationship."

Staying ahead of the IT movement

Recognising the benefits in selling cloud services through the Hosted Network Partner Program, Damon is confident that "having a point of difference to our [MayTek] competitors has been a big advantage... we aren't just 'the IT guy', we want to work with our clients and be their Partner and grow their business with them."

Damon acknowledges that while he had no hesitations, "the only hesitation was from our client perspective and how they would react", he pauses, "there is always a level of concern as we are potentially putting our eggs in the one basket - but this is where the relationship between us and Hosted Network is important and they have been super receptive to that."

"We were enticed to the people first of all, then the technology after they [Hosted Network] had an understanding of what we wanted to achieve..."

- Damon May, Managing Director, MayTek IT Solutions

Working towards a complete cloud service offering

It was discussions around Desktop as a Service that initially attracted MayTek to Hosted Network, however Hosted Network's continual acquirement of new services has allowed MayTek to continually grow, Damon says, "it has allowed us to evolve, and stay ahead of our competitors in terms of offering new services to our market... it gives us the opportunity to have competition against larger competitors."

Hosted Network implement all its services internally, and encourage Partners to follow suit and experience the benefits associated with the solution they are selling. MayTek implement VoIP internally and list the savings associated as a stand out benefit. "I looked at our phone bill and thought this is a ridiculous amount of money, then I received a notification about what Hosted Network could offer - the email came at the perfect time!"
