HOSTED NETWORK
BACKING UP WITH VEEAM

We backup with Veeam, so you can backup with confidence

Your data matters. The concept of downtime and lack of availability are fast becoming obsolete as backup software innovates and stamps its mark on improving workplace efficiency and longevity. Read on to discover why Hosted Network utilise Veeam® Software for backups and replication and why Veeam is the innovative provider of solutions that deliver Availability for the Modern Data Center™.
Partner with the best in backups

Hosted Network have partnered with Veeam, the best in backups who proudly boast a growing 500,000 users. Taking advantage of leading virtual architecture, Veeam allows users to recover infinite VM's in a matter of minutes as well as automatic recoverability testing, eliminating agents in advanced file and application-item recovery.

Learn backups 101, with rule "3-2-1"

Do you know how many backup files your organisation needs and where they should be kept? Companies globally have started adhering to what is now known as the "3-2-1 rule", whereby it is crucial to keep three copies of data, on two types of storage, with one copy being stored offsite. To abide by this backup rule, it is essential to have at least two sites of data, which is where Veeam's latest release, Veeam Cloud Connect, provides the perfect solution.

x 3   x 2   x 1

Create **3** copies of data (1 primary and 2 backups)   Keep data on at least **2** types of storage media   Store **1** of these offsite (cloud)

Keep secure and connect with Cloud Connect

Veeam Cloud Connect does exactly that, creates a connection between its customers and service providers to send data offsite in a simple and secure way. With Cloud Connect, customers can easily move their backups to a cloud repository without the need to invest in offsite infrastructure. This repository is then managed by Hosted Network, as a Veeam Cloud Service Provider and the customer is able to easily begin sending their virtual data to Hosted Network's Cloud Connect repository.

Business benefits

By backing up with Cloud Connect you eliminate the risk of catastrophic data loss and reap the benefits of no upfront investments. As well as this, Cloud Connect sees advantages across the below areas:

- **Hosted offsite backups:** Get your backups offsite to a hosted cloud repository through an SSL connection and cloud gateway
- **Complete visibility and control:** Access and recover data in hosted backup repositories directly from the backup console and track cloud repository consumption
- **Modern backup architecture:** Leverage Built-in WAN Acceleration, Backup Copy jobs, forever incremental backups
- **End-to-end encryption:** Rest easy by encrypting all data at-source, before it leaves your network

Service providers are able to provide a Veeam-powered service to their customers and proudly announce the reputable brand to their own clients.

Disaster Recovery the right way

Backing up with Veeam isn't just a safety precaution for ensuring 'always on' data, Cloud Connect is a Disaster Recovery necessity at an affordable, pay per VM price. Backups can be recovered in unprecedented time in the event of a disaster and work is able to continue without any detrimental revenue loss. With 1 in 6 recovery backups failing, Veeam Cloud Connect ensures data is always on and has a 24/7 accessible guarantee.

Easily restore with VMware VCloud

Hosted Network clients who are already running VMware VCloud Infrastructure as a Service (IaaS), can confidently restore data straight to Hosted Network's infrastructure in the event of disaster, minimising downtime even further and providing a fully integrated, secure and efficient management of offsite backups.
