

Managed Next-Generation Firewall

Protect your clients' data with the best in breed security offering powered by Sophos

As new cyber threats pop-up every day, protecting businesses from breaches should be a top priority.

Cybersecurity has never been more advanced, but it doesn't have to be complicated!

Hosted Network's Next-Generation Firewall provides an enterprise-grade and cost-effective security solution to keep your clients safe from network attacks and intrusions, while also allowing your technical staff to focus on other business priorities.

Next-Generation Protection From Advanced Threats

Powered by Sophos, this award-winning security solution is designed to predict and prevent attacks before they reach your network. It also includes:

- Intrusion Protection System
- Deep Packet Inspection
- Application control and web filtering
- Two Factor Authentication
- Client VPNs for external access control

Fully-Managed Security Solution

Our fully-managed firewall removes the pain of maintenance and costly in-house IT resources. From configuration, installation, and day-to-day maintenance, our expert cybersecurity support team has your back. Our service covers:

- Monitoring and reporting
- Hardware replacement in the case of failure
- OS updates, patches and bug fixes
- Access to knowledgebase articles
- Online ticket portal access
- Complete life cycle support

How it works:

Firewalls are the central point for all traffic flowing in and out of your network. Ensuring your firewall has the latest next generation functionality ensures you have the visibility and control over what's entering and exiting your network.

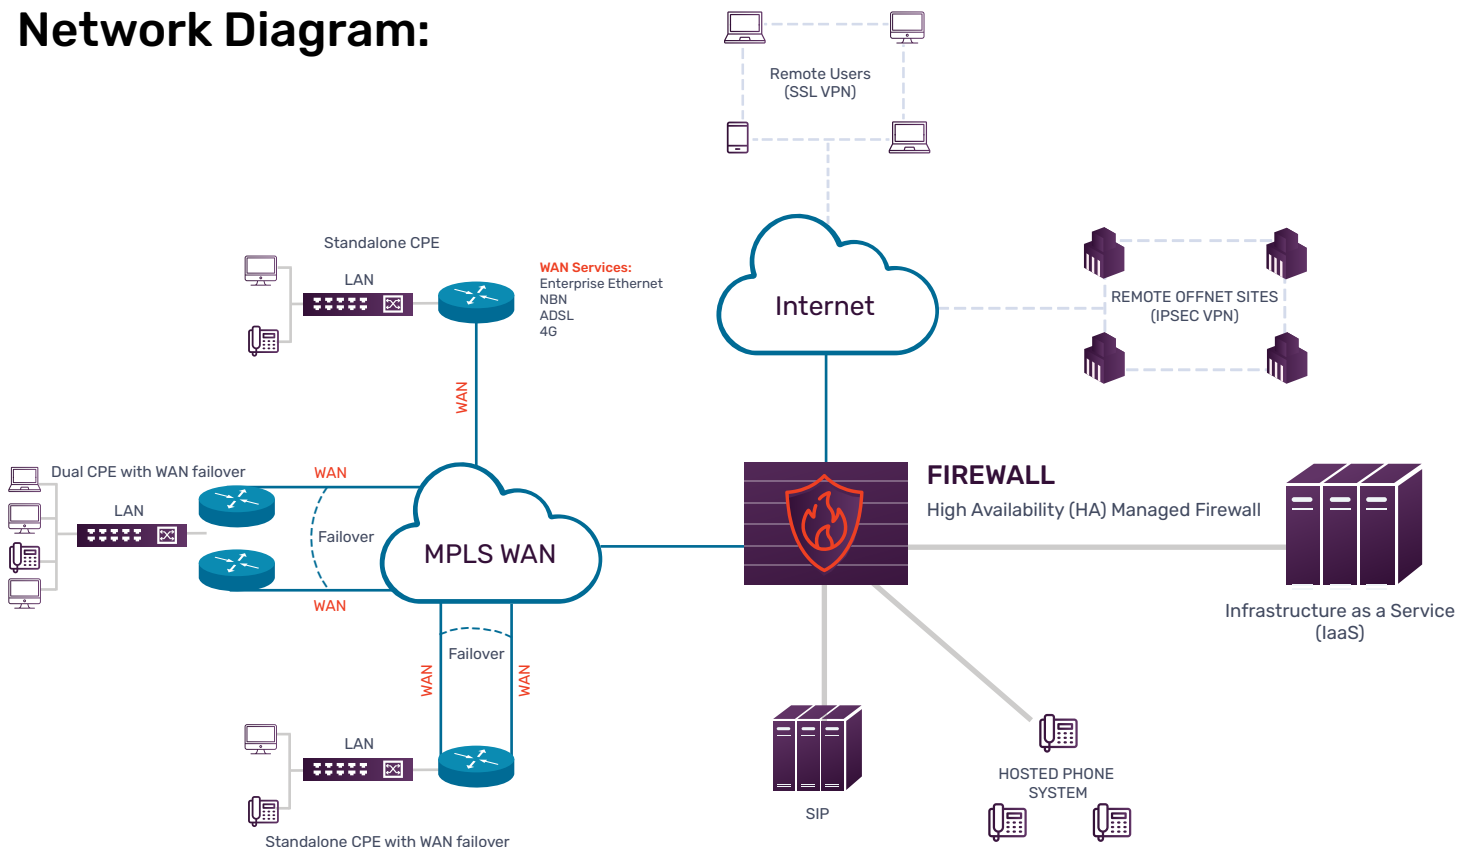

Our Managed Next-Generation Firewall uses enterprise-grade firewalls that operate in a High Availability (HA) cluster which maintains uninterrupted service in case of power outages and hardware or software failure.

With this reliable security solution, partners and clients can rest assured they have the best protection in the market today. Powered by Sophos, expect security without compromise securing your clients' network, application, cloud or mobile environments. More than 330,000 customers trust Sophos to protect their businesses.

Industry-Leading Threat Intelligence:

 35,000 malicious programs neutralised per minute	 720 Zero Day vulnerabilities discovered per second	 65,000 65,000 BOTNETC&C communication per minute

What are the benefits?

✓ Reliable service for complete peace of mind

We offer around-the-clock monitoring and support.

✓ A simple security addon

We offer an extensive range of security features and services, packaged and bundled to make ordering simple. Easily add on our Next-Generation Firewall service to:

- Infrastructure as a Service
- Desktop as a Service
- Colocation
- SD-WAN
- and our range of WAN technologies such as nbn and business grade fibre.

✓ Cost-effective security

Hosted Network's Managed Next-Generation Firewall is competitively priced as a fixed monthly fee, allowing you and your clients to avoid the high upfront costs of a true Unified Threat Management solution.

✓ Let us manage your security

Focus on what you do best and free your staff up by taking advantage of our management services. Need a firewall change? We're only a support request away.

✓ Next-Generation Security Capability

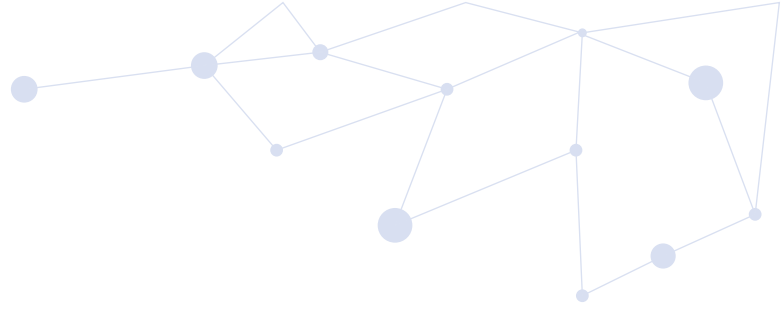

Move beyond a simple firewall by enabling true Unified Threat Management services to the edge of your network. Designed to adapt to rapidly changing threats such as known bad hosts and malware and to block most attacks before they become a risk.

✓ Fully Managed Solution

A comprehensively packaged and fully managed solution where our team will support and maintain your Next-Generation Firewall.

About Hosted Network

We're a wholesale cloud and telco provider that focuses on delivering exceptional partner experience.

Our primary focus is providing cloud and telco solutions the way it should be for MSPs - simple, easy, with no margin burn.

Our core solution lineup includes connectivity, voice, cloud and security offerings, all carefully crafted with our MSP partners in mind. We understand the importance of efficiency and the need to deliver exceptional services to your clients without unnecessary complexities often experienced with major players.

Starting out as a traditional MSP in Sydney's west back in 2003, we've not only navigated growing an MSP business first-hand, but we've also learnt a lot from our community of over 150 Australian MSPs. Since transitioning to an entirely channel-only model in 2013, we've made solving business problems through technology.
